Students are provided with the tools to become critical thinkers: to ask questions, to apply rules and develop models, and to evaluate the outcome. In addition, Steven and Susan Zumdahl crafted ChemWork, an online program included in OWL Online Web Learning to support their approach, much as an instructor would offer support during office hours. Chemical reactions are covered early, to capture student interest, leaving more abstract material for later chapters. The authors explain chemical concepts by starting with the basics, using symbols or diagrams, and concluding by encouraging students to test their own comprehension of the solution. This step-by-step approach helps students develop critical problem-solving skills. Also, the accessible explanations and visualizations throughout the text motivate students and engage them in the material by helping them to connect abstract chemical principles to real-life experiences. The pedagogy includes chapter-opening discussions that introduce students to relevant applications and Chemistry in Focus boxes that describe everyday applications of chemistry such as artificial sweeteners, foaming chewing gum, and fake fats. Current applications appear throughout the text with easy-to-understand explanations and analogies.

Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students learn to think like a chemists so they can apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes.
